Everyday …

2 AM: Server downloads tweets from targeted accounts
        (~600,000 tweets)

9 AM: Students get to work…
        Identify the main events
        Identify the tweets that discuss each main event
        Summarize each event, by flock.

Data + Computation is a 6th sense

What is an event??
How to determine the tweets to include??

The students summarize the data with computational tools to make contextually dependent decisions.

This is not artificial intelligence.
It is human intelligence hooked up to a 6th sense.
